

Arash Izadi

Senior Software Engineer

📍 Temecula, CA ✉ thisisarash@proton.me 🌐 arashizadi.com 🐙 github.com/arashizadi 🔗 linkedin.com/in/arashizadi

SUMMARY

Senior Software Engineer focused on platform infrastructure, reliability engineering, cloud operations, and developer productivity. Experienced in designing and operating AWS/Kubernetes-based systems, modernizing legacy applications, building CI/CD automation, and improving observability across production environments. Hands-on with Terraform, GitHub Actions, Datadog, CloudWatch, Scala, Go, Ruby on Rails, and Python, with practical experience applying AI/LLM tooling to accelerate engineering workflows.

SELECTED EXPERIENCE

RVO Health - Senior Software Engineer, Platform & Infrastructure (2026 - Present)

- Led platform and infrastructure architecture for application, integration, and AI-assisted engineering workflows across production systems.
- Improved AWS reliability and operational maturity by automating infrastructure workflows, hardening services, and optimizing performance and cloud cost.
- Built secure AWS-native platform capabilities using Lambda, IAM, Secrets Manager, S3, and Route53, with emphasis on least-privilege access and auditability.
- Improved deployment safety and developer velocity by building reusable GitHub Actions CI/CD workflows, standardized release processes, and automated validation.

RVO Health - Senior Associate Platform Engineer - Platform & Infrastructure (2024 - 2026)

- Improved Kubernetes platform reliability by identifying infrastructure risks, driving long-term mitigations, and standardizing operational practices.
- Modernized legacy applications and integration paths through containerization and standardized Helm-based deployments.
- Streamlined delivery workflows using GitHub Actions, ArgoCD, and custom Go tooling to reduce manual release overhead.
- Expanded production observability by integrating Datadog and CloudWatch dashboards, alerts, and service health indicators.

RVO Health - Associate Software Engineer - MVP Launch Team (2023 - 2024)

- Led development of a new MVP initiative under NDA by designing scalable Scala components under tight delivery timelines.
- Created system design diagrams, technical flowcharts, and implementation plans to align engineers and stakeholders on complex feature behavior.

Optum/RVO Health - TDP/Associate Software Engineer - Core Product Team (2022 - 2023)

- Built secure Scala microservices supporting regulated healthcare workflows with compliance, reliability, and maintainability requirements.
- Developed REST APIs and PostgreSQL-backed integration points to improve data consistency across internal and external systems.

CORE SKILLS

- Distributed systems and reliability engineering
- AWS, Kubernetes, Docker, Helm, Terraform
- GitHub, GitHub Actions, CI/CD automation
- Observability with Datadog, Splunk, and CloudWatch
- GCP exposure through Terraform-based academic and project work
- Ruby on Rails, Go, Scala, Python, Bash
- Service health indicators, operational metrics, and incident response
- Security, compliance, IAM, and auditability
- System design, full-stack development, integration engineering
- Developer tooling, platform automation, and application modernization
- Prompt engineering, RAG systems, LLM context management, internal AI tooling
- Multi-agent workflow design for parallel engineering execution

EDUCATION

- B.Tech. in Emerging Media Technology, CUNY New York City College of Technology, 2021
- A.A.S. in Music Production, CUNY Queensborough Community College, 2018
- Azure Fundamentals and Azure AI Fundamentals, Microsoft Learn, 2020

SPEAKING & COMMUNITY

- Speaker, Intuit Open Source Meetup | Platform Engineering & AI (San Diego, April 2026): Presented "What is Devbox and why you need it?" on reproducible developer environments, onboarding speed, and CI consistency.
- Active in open source and engineering meetups across San Diego, Irvine, and Los Angeles.
