Arash Izadi

Senior Software Engineer · Platform & Infrastructure

Temecula, CA thisisarash@proton.me arashizadi.com linkedin.com/in/arashizadi

SUMMARY

Platform and backend engineer with 4+ years at Optum and RVO Health running AWS/Kubernetes platforms for HIPAA- and SOC 2-regulated healthcare products. Owns release engineering, CI/CD, infrastructure as code, access control, and cloud cost for ~60 microservices and 100+ repositories across five teams, and sits on the tech-leads group that reviews architecture platform-wide.

EXPERIENCE

RVO Health — Optum (UnitedHealth Group) × Red Ventures joint venture · Irvine, CA / Remote **Feb 2022 – Present**

Senior Software Engineer, Platform & Infrastructure *Feb 2026 – Present*

- Re-architected a mission-critical self-managed SFTP subsystem onto AWS Transfer Family (Lambda auth, Secrets Manager, S3, KMS) with Terraform and a new AWS SDK library in Rails, serving dozens of B2B partners.
- Led an account-wide cost audit that materially reduced AWS spend: ECR lifecycle policies, log-volume reduction, right-sizing, and decommissioning idle resources.
- Designed scoped, least-privilege authorization for engineers and services, including just-in-time admin access and per-resource visibility, across a SOC 2 and HIPAA environment.
- Modernized the core Rails monolith: migrated its database across regions, replaced legacy job systems with Solid Queue and Kubernetes-native jobs, and rewrote jQuery views as modern Rails templates.

Senior Associate Platform Engineer *Mar 2024 – Feb 2026*

- Built the standard release and promotion pipeline in Go on GitHub Actions (GitHub and Jira APIs): promotion time cut from hours to minutes (~95%), fully auditable, carrying ~120 deploys a week.
- Hardened EKS with IRSA, VPC CIDR controls, and least-privilege IAM, and enforced service-to-service mTLS with Linkerd policies across all services.
- Built weekly ECR image vulnerability scanning on a GitHub Actions cron with results to Slack, so legacy images are patched against a refreshed CVE database and pass Wiz compliance scans.
- Containerized legacy VM-based workloads and standardized Helm deployments with ArgoCD (GitOps); took over stalled containerization efforts and delivered them.
- Administered GitHub for 100+ repos (branch protection, CODEOWNERS, required checks, secret scanning); migrated CI from Jenkins to GitHub Actions and packages from JFrog Artifactory to GitHub Packages.
- Managed AWS with Terraform, expanded Datadog and CloudWatch alerting, and served on the platform on-call rotation leading incident response and RCA; authored the RFC for AWS Bedrock-assisted on-call triage.
- Launched weekly platform office hours and drove Devbox adoption across the engineering organization through a documented bootstrap and self-service onboarding.

Senior Associate Software Engineer, MVP Launch Team *Jul 2023 – Mar 2024*

- Shipped a HIPAA-regulated B2B/B2C MVP on schedule with a 10-person team: designed and implemented Scala backend services and event-driven logic; wrote system diagrams and technical docs; carried on-call and hotfix releases.

Associate Software Engineer, Core Product (Optum TDP, then RVO Health) *Feb 2022 – Jul 2023*

- Operated and debugged 24/7 production Scala microservices for state-government healthcare clients under SLA; built PostgreSQL-backed REST APIs and drove RCA fixes that cut incident recurrence (Splunk, Datadog).

SKILLS

- **Cloud & Infrastructure:** AWS (EKS, EC2, Lambda, S3, RDS, IAM, KMS, Secrets Manager, Transfer Family, CloudWatch, Bedrock), Kubernetes, Helm, ArgoCD, Terraform, Docker, Linkerd
- **CI/CD & Observability:** GitHub Actions, GitHub administration, GitOps, Jenkins, Devbox, Datadog, Splunk, CloudWatch
- **Languages:** Go, Scala, Ruby on Rails, Python, Bash, SQL (PostgreSQL)
- **Security & Practices:** SOC 2, HIPAA, least-privilege IAM, IRSA, mTLS, Wiz, incident response, RCA, RFCs, system design, mentoring

EDUCATION

- B.Tech., Emerging Media Technology, CUNY New York City College of Technology, 2021 (Dean’s List)
- M.S. Computer Science, University of Colorado Boulder, in progress (part-time)

TALKS & HONORS

- Speaker, Intuit Platform Engineering & AI Open Source Meetup, San Diego, April 2026: “What is Devbox and why you need it?” on reproducible developer environments and onboarding.
- 2nd place, US-China Young Maker Competition 2026 (Shanghai): platform lead for AccessFirst, an AI chat service for mental-health treatment navigation in LA County — Kubernetes, Helm, RFCs, repository governance, HIPAA/SOC 2-ready design.
